

Jack Levis

Senior Director, Industrial Engineering, UPS

“Through the marriage of technology, information, and analytics, UPS reduces cost and improves services. These advanced technologies streamline our business processes and ultimately benefit our customers.”

Mr. Jack Levis will speak about how UPS uses data analytics to achieve business advantage through optimization. In particular, he will share his experiences in implementing UPS’s award winning dispatch optimization tool **ORION** (On Road Integrated Optimization and Navigation), which is saving \$300M to \$400M annually, in part due to a reduction of about 185 million miles driven per year by delivery personnel.

March 21, 2017 (Tuesday)

4 p.m. at New Classroom Building 220

5:15 p.m. Reception at Durham Hall 260
